**Abstract**

**Background**

Of the 108 species that occur in Georgia, ten species are insectivores belonging to the order Eulipotyphla. Forty percent of them are endemic to the Caucasus and sixty percent are endemic to the Middle East, including the Caucasus. Up to now, no comprehensive data on the distribution of insectivores in Georgia have been available.

This study presents the long-term quantitative data on butterflies in Wando Arboretum, which represents the only warm-temperate forest located in the southernmost part of South Korea. This arboretum has significant academic value as approximately 770 species of rare woody plants or herbs, such as the Japanese evergreen oak (*Quercus acuta*), found in warm temperate zones grow under natural conditions here. In this project, the butterflies in this region were studied due to their sensitivity to temperature changes. The study was conducted from March-April to October-November over 5 years (2017-2021) in the region dominated by Japanese evergreen oak. We found 1,743 individuals of 47 butterfly species belonging to five families. The acquired butterfly data could serve as a reference for the further development of a network-oriented database for assessing temporal climate changes.

**OPEN** DATA DESCRIPTOR

**Dataset of metals and metalloids in food crops and soils sampled across the mining region of Moquegua in Peru**

Noelia S. Bedoya-Perales<sup>1</sup>, Elias Escobedo-Pacheco<sup>2</sup>, Diogo Maus<sup>2</sup>, Alisson Neimaier<sup>3</sup> & Guilherme Pumi<sup>3</sup>

In recent years, there has been an increase in interest in the accumulation of heavy metals and metalloids (HMM) in areas where agriculture and mining exist side by side. As a contribution to this body of knowledge, we report the first dataset into HMM concentrations in food crops and agricultural soils in Moquegua, which is a typical mining region and contains one of Peru's largest copper deposits. Thanks to its geographic diversity, samples were taken in different agroecological regions at altitudes between 5 and 3,934 m. For food crops, 31 elements were measured using inductively coupled plasma mass spectrometry and atomic absorption spectrometry. For soils, 23 elements were measured using inductively coupled plasma optical emission spectrometry. Thus, the dataset includes a total of 13,828 observations from 341 sampling sites. We hope that this dataset will facilitate a wide range of agricultural and food safety studies, as well as serving as a reference for monitoring changes in pollution over time or comparing HMM levels with other farmlands influenced by mining activities.

**Background & Summary**  
Heavy metal contamination of food crops and soils is a pervasive problem worldwide, arising from both human and natural activities that release these elements into the environment. Heavy metals can penetrate soil, enter groundwater, and accumulate in the food chain, where they can cause harm to the biota<sup>1</sup>. They can therefore become damaging to human health and ecosystems, depending on the concentration and exposure time<sup>2,3</sup>. However, heavy metals are not the only damaging elements, other metals and metalloids can be hazardous to plants by inducing symptoms of phytotoxicity<sup>4,5</sup>. This problem is exacerbated in areas where mining and agriculture coexist, as studies have shown that soil and crop contamination is more severe than in districts without mining or located far from mining activities<sup>4,6</sup>. An excess of these elements in agricultural soils can reduce crop yields because of the risk of bioaccumulation and biomagnification in the food chain<sup>10</sup>, although the mechanism and intensity of absorption by plants varies by species, variety, altitude at which they are grown, soil characteristics and other factors<sup>11,12</sup>. Comparing levels of heavy metals and metal(lloid)s (HMM) with regulatory standards is one approach to

Cucumber dataset  
Deep learning  
Computer vision

**Specification table**

<b>Subject:</b>	Computer Science
<b>Specific subject area:</b>	Identification of Plant Diseases, Deep Learning, and Computer Vision: Image
<b>Type of Data:</b>	From 6th to 30th May 2022, we collected disease-free and various disease-affected cucumber images from real fields using Nikon D5300 a Single-lens reflex digital camera to obtain raw images.
<b>How the data were acquired:</b>	Raw jpg
<b>Data format:</b>	Previously, no such pre-treatment of the samples was done. With the cooperation of an expert from an agricultural institution, we gathered all the cucumber disease images along with disease free from real fields.
<b>Description of data collection:</b>	Institution: Cultivated cucumber field of size 4356 square feet by a local farmer. Zone: Basundia, Jashore
<b>Data source location:</b>	Country: Bangladesh
<b>Data accessibility:</b>	Repository name: Mendeley Data Data identification number (DOI number): 10.17632/y6d3z6f8z9.1 Link of the dataset: <a href="https://data.mendeley.com/datasets/y6d3z6f8z9/1">https://data.mendeley.com/datasets/y6d3z6f8z9/1</a>

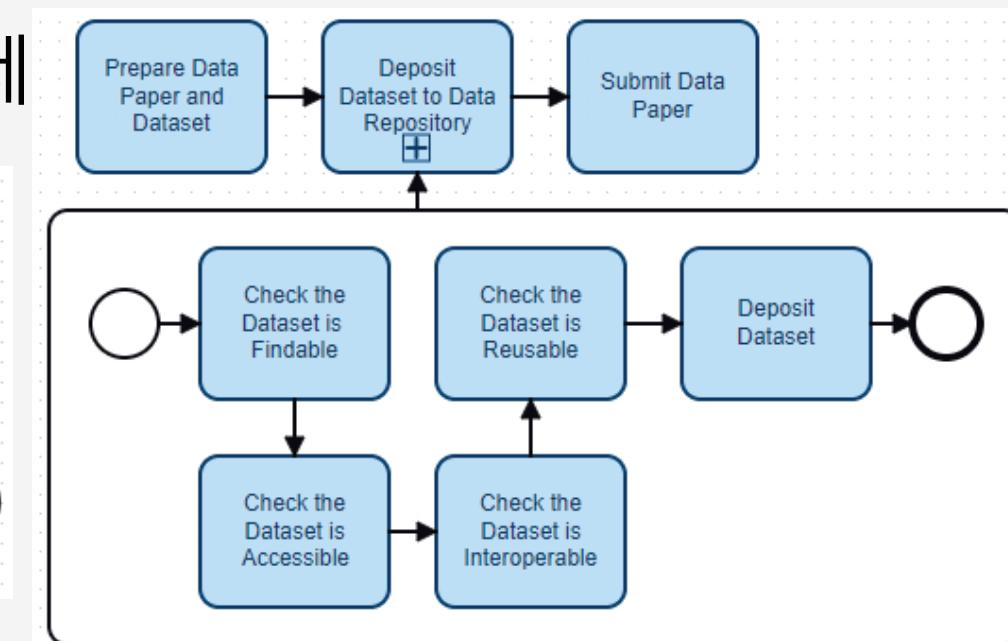

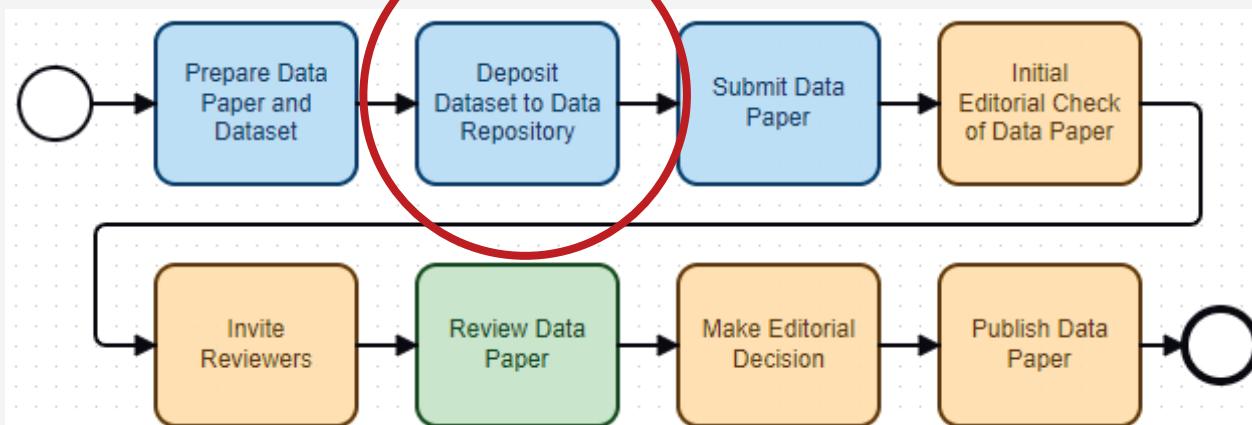

**Value of the Data**

- Cucumber disease detection is typically done manually by individuals, which is time-consuming and ineffective for both farmers and retailers. For this reason, the development of a machine vision-based model is essential that will minimize human effort, expense, and production time in the agricultural industry by identifying different cucumber diseases. An effective dataset is a prerequisite for developing a better classification model.
- This dataset presents the visual appearance of cucumber diseases in a hyperspectral or

**How Do Astronomers Share Data? Reliability and Persistence of Datasets Linked in AAS Publications and a Qualitative Study of Data Practices among US Astronomers**

Alberto Pepe<sup>1,2\*</sup>, Alyssa Goodman<sup>1,2</sup>, August Muench<sup>1</sup>, Merce Crosas<sup>2</sup>, Christopher Erdmann<sup>1</sup>

<sup>1</sup>Harvard-Smithsonian Center for Astrophysics, Cambridge, Massachusetts, United States of America, <sup>2</sup>Institute for Quantitative Social Science, Harvard University, Cambridge, Massachusetts, United States of America

**Abstract**

We analyze data sharing practices of astronomers over the past fifteen years. An analysis of URL links embedded in papers published by the American Astronomical Society reveals that the total number of links included in the literature rose dramatically from 1997 until 2005, when it leveled off at around 1500 per year. The analysis also shows that the availability of linked material decays with time: in 2011, 44% of links published a decade earlier, in 2001, were broken. A rough analysis of link types reveals that links to data hosted on astronomers' personal websites become unreachable much faster than links to datasets on curated institutional sites. To gauge astronomers' current data sharing practices and preferences further, we performed in-depth interviews with 12 scientists and online surveys with 173 scientists, all at a large astrophysical research institute in the United States: the Harvard-Smithsonian Center for Astrophysics, in Cambridge, MA. Both the in-depth interviews and the online survey indicate that, in principle, there is no philosophical objection to data-sharing among astronomers at this institution. Key reasons that more data are not presently shared more efficiently in astronomy include: the difficulty of sharing large data sets; over reliance on non-robust, non-reproducible mechanisms for sharing data (e.g. emailing it); unfamiliarity with options that make data-sharing easier (faster) and/or more robust; and, lastly, a sense that other researchers would not want the data to be shared. We conclude with a short discussion of a new effort to implement an easy-to-use, robust, system for data sharing in astronomy, at [theastrodata.org](http://theastrodata.org), and we analyze the uptake of that system to-date.

# Zenodo 핵심 개념과 관계 모델 (진행 중)

# Zenodo 핵심 개념과 관계 모델 (진행 중)

### 3. 데이터학술지와 데이터저장소 협업 모델

# 데이터학술지,저장소 서비스의 공통점과 차이점

## 데이터학술지

- 데이터논문 접수
- 데이터논문 심사
- 데이터논문 영구ID 발급
- 데이터논문 출판
- 데이터논문에 데이터셋을 상세히 서술  
(데이터셋 프로젝트, 배경, 가치, 잠재적 사용사례 등)
- ...

## 데이터저장소

- 데이터셋 저장
- 데이터파일 관리
- 데이터셋 영구ID 발급
- 데이터셋 버전관리
- 커뮤니티 서비스
- 데이터셋 통계/인용  
서비스
- ...

# 데이터저장소와 데이터학술지 비교

- 데이터저장소는 데이터셋의 보존, 공유, 재사용에 유용
  - 데이터셋의 메타데이터를 관리, 제공
  - 데이터 인용, 사용통계 서비스 등 제공
    - 일부, 커뮤니티 서비스 제공
  - 하지만, 데이터셋에 대한 심도있는 **동료심사를** 하지 않음
    - 메타데이터에 대한 필수/선택항목에 대한 체크는 진행
  
- 데이터학술지의 논문은 데이터셋의 문맥 정보 이해에 도움
  - 데이터셋의 메타데이터를 **더 체계적으로 관리, 제공**
    - 데이터 소개, 관련 프로젝트, 배경, 재사용 등 상세 정보
    - 데이터 생성 방법, 데이터 품질 관리 등 문맥 정보를 이해할 수 있음
  - **동료심사를** 진행하며 데이터논문과 데이터셋의 품질 향상

## 협업 시나리오 (1/2)

---

1. 데이터학술지에 출판되는 데이터셋을 FAIR하게 관리하기 위한 데이터저장소의 특정 커뮤니티 개설하기
  - 데이터학술지 큐레이터 지정하기
  - 저자들에게 데이터셋 기탁(저장)/관리에 관한 안내 필요
  - 데이터논문 출판 후 데이터셋 비공개/삭제 방지
  
2. 데이터학술지에 출판될/된 데이터셋을 큐레이터가 승인하기
  - 데이터학술지 목표/범위에 맞는 데이터셋 승인
  - 데이터셋에 관한 메타데이터 기초적인 확인/검증
    - 데이터논문 심사시간 단축

## 협업모델 (2/2)

---

### 3. 데이터학술지 서비스에서 데이터저장소의 메타데이터, 주요 서비스를 사용하기

- 데이터논문 심사에서 활용
- 데이터학술지 데이터논문 데이터와 데이터셋의 메타데이터 정보 제공
- 출판된 데이터셋을 관리 (인용/통계 서비스 활용)
  - REST API를 메타데이터 접근하고 활용하기

### 4. 데이터학술지에서 데이터저장소로 데이터셋 파일 업로드하기

- 데이터셋의 크기가 크지 않은 파일

# 데이터논문과 데이터저장소 연계 서비스 사례

## ■ Scientific Data 학술지

- Dryad 지원
- Figshare에 데이터 업로드 지원

Repository Name	Information on fees/costs	Size limits	Integrated with <i>Scientific Data's</i> manuscript submission system	Re3data / FAIRsharing entry
Dryad Digital Repository	\$120 USD for first 20 GB, and \$50 USD for each additional 10 GB	<a href="#">None stated</a>	Yes ✓	<a href="#">view FAIRsharing entry</a>
figshare	100 GB free per <i>Scientific Data</i> manuscript.	1 TB per dataset	Yes ✓ - To qualify for the 100 GB of free storage, data must be uploaded to figshare via our submission system. <a href="#">Download instructions.</a>	<a href="#">view FAIRsharing entry</a>
Harvard Dataverse	<a href="#">Contact repository</a> for datasets over 1 TB	2.5 GB per file, 10 GB per dataset	No	<a href="#">view re3data entry</a>
Open Science Framework	<a href="#">Free of charge</a>	5 GB per file, multiple files can be uploaded	No	<a href="#">view FAIRsharing entry</a>
Zenodo	<a href="#">Donations towards sustainability encouraged</a>	50 GB per dataset	No	<a href="#">view re3data entry</a>
Science Data Bank	<a href="#">Free of charge</a>	8 GB per file, no limit to dataset size	No	<a href="#">view FAIRsharing entry</a>

## ■ J. of Open Humanities Data

### ■ 데이터 업로드 안내

- Harvard Dataverse, 다른 데이터저장소 기탁 안내

The Dataverse Network Project

Location	<a href="https://dataverse.harvard.edu/dataverse/johd">https://dataverse.harvard.edu/dataverse/johd</a>
Focus and suitability	Data can be uploaded to the JOHD Dataverse Repository designed specifically for papers in the Journal of Open Humanities Data. We recommended this repository to authors because it is managed entirely by the JOHD editorial staff and ensures maximum interoperability between datasets and data papers.
Cost	Free for all JOHD authors.
Licenses	CC0
Identifiers used	DOI

<https://openhumanitiesdata.metajnl.com/about>

# 데이터논문과 데이터저장소 연계 서비스 사례

## ■ J. of Open Humanities Data

- Harvard Dataverse 데이터저장소에 데이터셋을 FAIR하게 관리

The screenshot shows the Harvard Dataverse interface for the **Journal of Open Humanities Data** (JOHD) Dataverse. At the top, there is a navigation bar with links for Add Data, Search, About, User Guide, Support, Sign Up, and Log In. Below the navigation bar, the JOHD logo is displayed, along with the Ubiquity Press logo and the text "ubiquity press open access".

The main content area displays the JOHD Dataverse homepage. It includes links for "Journal of Open Humanities Data Dataverse" and "JOHD Website" (Ubiquity Press). Below these links, a breadcrumb navigation shows "Harvard Dataverse > Ubiquity Press Dataverse >".

On the right side of the page, there are "Contact" and "Share" buttons. A descriptive text explains that this repository is for humanities data described in papers submitted to the **Journal of Open Humanities Data (JOHD)**. The journal features peer reviewed publications describing humanities data or techniques with high potential for reuse. Humanities subjects of interest to JOHD include, but are not limited to Art History, History, Linguistics, Literature, Music, Philosophy, Religious Studies, etc. Data that crosses one or more of these traditional disciplines are highly encouraged.

At the bottom of the page, there is a search bar with the placeholder "Search this dataverse...", an "Advanced Search" button, and a "+ Add Data" button. On the left, there are filters for "Dataverses (0)", "Datasets (17)" (which is checked), and "Files (2,173)". There are also filters for "Publication Year" (2024 (4), 2023 (3), 2022 (3), 2021 (7)) and "Subject" (Arts and Humanities (17)).

The main content area shows a list of datasets. The first dataset listed is "Metadata for YOLOv5\_FPC Detected Images" by Lee, Sejoon; Jun, Bong Gwan; Kim, Byungjun, dated April 18, 2024. The description notes that the CSV and Excel file contain metadata for YOLOv5\_FPC-detected images, including URLs, Index, FileName, Year, Month, Day, YearMonthDay, and NewspaperSource. The second dataset listed is "Vinzent's Greek Reconstruction of Marcion's Apostolos" by Apr 16, 2024.

# 데이터논문과 데이터저장소 연계 서비스 사례

- International Neuroimaging Data-Sharing Initiative
  - 제노도에 연구데이터셋을 관리

The screenshot shows the Zenodo platform interface. At the top, there is a navigation bar with the Zenodo logo, a search bar, and links for 'Communities', 'My dashboard', and a user account. A green button labeled 'New upload' is visible on the right.

The main content area displays the 'International Neuroimaging Data-Sharing Initiative' (INDI) page. It features a logo for INDI (International Neuroimaging Data-Sharing Initiative). Below the logo, there are tabs for 'Records', 'Members', and 'About'. The 'Records' tab is selected, showing 9 results found, sorted by 'Newest'.

On the left, there are filters for 'Versions' (with an option to 'View all versions'), 'Access status' (with an 'Open' checkbox), and 'Resource types' (with options for 'Dataset' and 'Software').

The first dataset listed is 'Multicenter dataset of simulated neuroimaging features - quadratic relationship with age' (July 6, 2023 (1.0)). It has 222 views and 151 downloads. The description mentions a quadratic relationship with age and includes details about participants and features. The second dataset listed is 'Multicenter dataset of neuroimaging features (part II)' (April 19, 2023 (1.0)), which has 7 datasets and 2 software resources.

At the bottom, a note states: 'The CSV file contains the cortical thickness (CT) and fractal dimension (FD) estimated from the brain MR T1-weighted images contained in the'.

# 결론

---

- 데이터학술지, 저장소 서비스의 공통점
  - 데이터셋에 관한 데이터(메타데이터) 제공, 데이터셋 심사/검토
  - Findable, Accessible, Interoperable, Reusable 데이터셋 제공
- 데이터학술지와 데이터저장소간 협업모델 탐색 (시작 단계)
  - 데이터저장소에 데이터학술지 커뮤니티 개설하여 데이터셋 관리
    - 데이터학술지에 출판될/된 데이터셋을 큐레이터가 승인하기
  - 데이터학술지 서비스 확장
    - 데이터저장소로 데이터논문에서 서술하는 데이터셋 파일 업로드하기
  - 데이터학술지에서 데이터저장소의 메타데이터 기반 서비스 제공
